

Indochinese Tiger (*Panthera tigris ssp. corbetti*)

Table 1. National Tiger population estimates. The table below summarizes the national Tiger population estimates from which IUCN's global population estimate was derived. Estimates are of varying quality, with a few derived from a recent comprehensive scientific census (reliability = Good), but most extrapolated from partial site studies (Fair) as well as educated guesswork (Poor). Details on each country's estimates follow the table

Country	Tiger population estimates		Reliability
	Minimum	Maximum	
Cambodia	11	50	Fair
Lao PDR	30	30	Fair
Myanmar	100	150	Fair
Thailand	250	720	Fair
Viet Nam	30	150	Poor
Total	421	1,100
