

## African Wild Dog (*Lycaon pictus*)

Additional documentation.

**Table 1.** African Wild Dog pack structures used in the estimation of numbers of mature individuals. Weighted mean values are calculated taking into account the numbers of pack-years of data available from each study.

Site	Adult and yearling pack size	Proportion male adults and yearlings	Proportion adults and yearlings which are alphas		Proportion pups with sub-dominant fathers	Proportion pups with sub-dominant mothers	Sources*
			males	females			
Kruger	9.7	0.54	0.191	0.224	0.10	0.08	1,2
Selous	12.6	0.55	0.146	0.190			3
Okavango	10.4	0.54	0.182	0.213			4,5
Samburu-Laikipia	9.1	0.57	0.193	0.256			6
Hluhluwe-iMfolozi	8.1	0.58	0.300	0.430			7
<b>Weighted Mean</b>	<b>10.1</b>	<b>0.55</b>	<b>0.176</b>	<b>0.215</b>	<b>0.10</b>	<b>0.08</b>

† indicates sites enumerated within an adjoining site in 2012.

**Figure 1.** Fluctuations in the sizes of four wild dog packs in Kruger NP, south Africa. Over this 3-year period, the size of the Skukuza Pack varied by a factor of 14 (between 2 and 28 animals) and two other packs varied by a factor of nine. Figure reproduced from Mills (1993).

**Figure 2.** Rapid local extinction of wild dogs associated with rabies outbreaks in (a) Serengeti National Park, Tanzania, and land adjoining the Maasai Mara National Reserve (MMNR), Kenya, and (b) Madikwe Game Reserve, South Africa. At Madikwe, three dogs survived the outbreak after being taken into captivity and vaccinated. Data from Burrows *et al.* (1994), Kat *et al.* (1995), Hofmeyr *et al.* (2000).
