Assessment Information

Red List Category & Criteria: Least Concern [ver 3.1](#)

Year Published: 2023

Date Assessed: November 26, 2019

Justification:

La especie tiene una EOO de 103.392 km² que denota una amplia distribución, además el 28.1 % de sus registros están en áreas protegidas. Presenta algunas amenazas como pastoreo, agricultura y uso del recurso maderable, pero no afectan significativamente las subpoblaciones de la especie. Por lo anterior, se categoriza como Preocupación Menor (LC).

Geographic Range

Range Description:

Se distribuye en Colombia en bosques de montaña baja en los departamentos de Boyacá, Casanare, Caquetá y Meta.

Country Occurrence:

Native, Extant (resident): Colombia

Population

Dada la naturaleza de su crecimiento clonal y la falta de estudios sobre su ecología poblacional, para Colombia no se conoce nada sobre la abundancia o dinámica de las poblaciones de la especie.

Current Population Trend: Unknown

Habitat and Ecology (see Appendix for additional information)

Se encuentra en bosques húmedos pre montanos como elemento epífito de los árboles.

Systems: Terrestrial

Use and Trade (see Appendix for additional information)

No se han reportado usos para la especie.

Threats (see Appendix for additional information)

La principal amenaza para la especie es la expansión de la frontera agrícola y pecuaria, además de la extracción del recurso maderable, pero no afectan significativamente las subpoblaciones de la especie.

Conservation Actions (see Appendix for additional information)

Uno de sus registros se encuentra en área protegida. La especie se encuentra enmarcada en la resolución 0213 de 1977 que veda su uso y comercialización. Se recomiendan investigaciones relacionadas con la historia de vida y la ecología de la especie, así como la tendencia de sus poblaciones y del hábitat para determinar estrategias de manejo para los ecosistemas donde la especie es frecuente.
